

REST API allows modularity of function and form.

[What is a RESTful API? | Creating a REST API with Node.js](#) (Playlist)

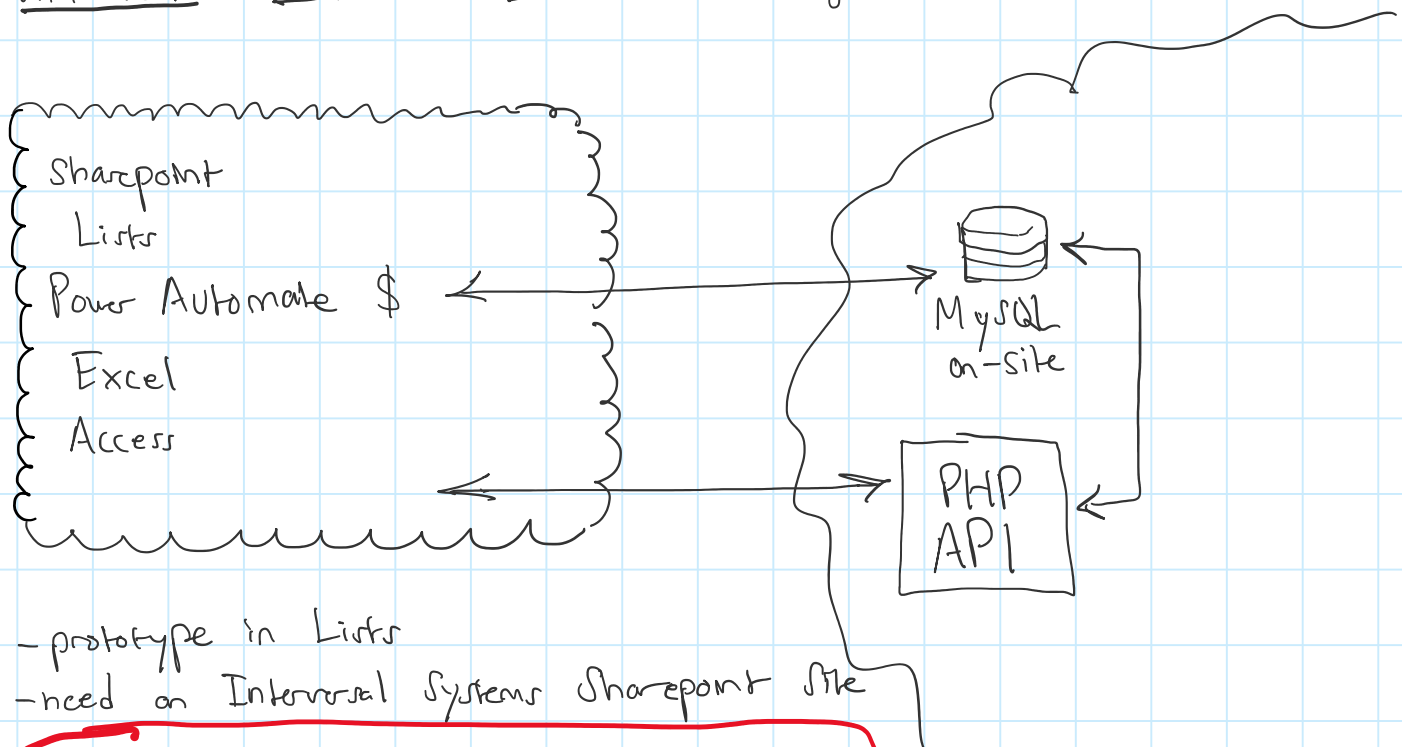

Is a really good video!

doing
Laravel

~~Keeping the API in its working PHP state for now.~~
~~node.comedy...~~

Using Laravel + JWT to connect to MS Power Automate
(implement OpenAPI specification)

what router? what data? what am I doing this for?

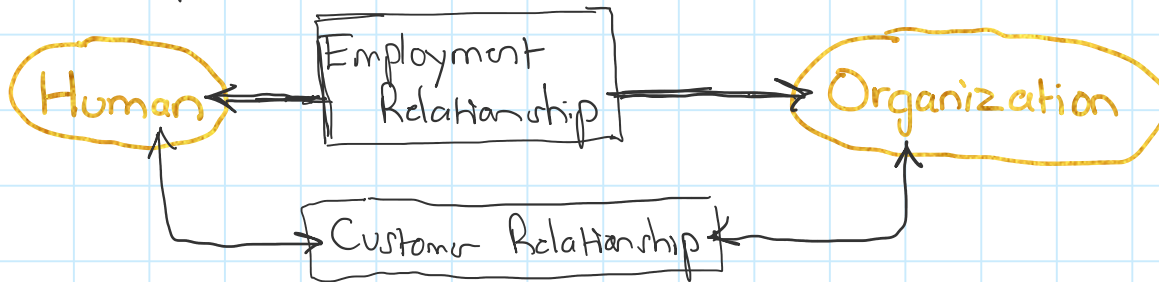

- need an Internal Systems Sharepoint Site

The plan — have lots of general data in one place just to play around with...

products, instances of products, ingredients, etc

human table for ancestry project

link all projects into database

Human-Human Relationship
Social, Familial

Project

Work Order

I want to work with data.
I want to produce data.

Every place I work, I start modeling the data structures involved.

I don't want to work as a technician forever, it's beyond my abilities.

LARAVEL

- take the source code for ISME and implement in Laravel. Test on work laptop.
- batch file to deploy to Jupiter via SFTP
- set API up again using Passport

- how to do migration?

{etc}. interuniversal. systems /api/
what is on Jupiter? (Ganymede)

Globally Unique Identifier
Uniform Resource Identifier

Department	uses	Application
Department	uses	Room
Floor	contains	Room
Building	contains	Floor
User	represents	Department

Instance (has SN) of [Model of Product] of Organization

Internet of Things

Human (Adam Mitchell Young) of [homo sapiens sapiens] of instance of life that makes up an organism. Organisms are part of a phylogenetic tree, which is not actual, but estimated. evolution is a gradient. successive releases are unique and not part of an advancing "front"

every -thing- is a collection of smaller parts.

DNA Sequence	Script	Sheet Music
Replication	Performance	Instance

MAC Address: SN

IPv6 is transient.

Serial numbers and unique identifiers can be keyed on each other to "identify" something in the context of a set

DOMAINS and SETS

Is this getting fractally complex the more I look into it? Is this a fruitless endeavor? All things must be identified so that metadata can be attached to them.

The human brain is a pattern recognition machine. Emotion and reaction are metadata

"executables" that run in response to confirmation of a pattern

Totally lost in response to not being able to indulge or experience life. The fantasy is unattainable. no surprises. it's a simulation of something that simply cannot be. I cannot have Victoria, she doesn't want me. and I won't accept it. I'm lost in the middle of things. Lost in life going on as normal. What's the next disaster or big change? COVID-19 is here, but we've even adapted to that, that's normal.

What if we were assigning serial numbers to each individual virion? what would that tell us? something, but the scope would be so infinitesimally small that we would miss the big picture. the big picture even being an individual person's reaction to COVID-19? it's a huge massive war on a biological level, above a war fought on the chemistry-level, above one fought in the physics level, above one fought at the micro-mathematical level.

Maybe I'm meant to stay where things are slightly under my ability. just hang out where the stress is minimal. un-stress-edly go into that good night? fantasize about doing the thing. head in the clouds my entire life.

Re-defining the models in ISME is essential to making the program applicable and useful to multiple individuals.

People live their lives at different scales and the human centered one is the one we can all most identify with, hopefully.

Prompt user for a bit at a time.

~~I am filling out this ticket~~

"go to your supervisor"

- I am having this issue
- Another user is having this issue
- Multiple users are having this issue

Meter that shows how descriptive the user is being

Auto - suggests help topics while
" " " "

Auto - suggests help topics while "loading"

- Form suggestions, access to blank forms and PDFs to download
- Search function
- Intranet reorganization

app. interval. systems / api /

interversse → new "universe"

free/open source graph database

make interval systems a nonprofit, post to GitHub?

<u>sets</u>			<u>relations</u>	
1	uuid	parent	1	source / destination
2	uuid	parent	2	
3	uuid	parent	3	

NEED to start prototyping this. Fail fast.

1. ISME → Interversse

2. County of Kroy Intranet Page

Document-based knowledge database/wiki.

MongoDB use cases - I keep reading big data

Users should see different service links based on which department they use, not all of them clumped together.

This intranet page isn't even *maintained*...

Snapshot, and link. When linking to an external reference, snapshot, and link. Like a dependency. Snapshot, and link.

Laravel Implementation

3/27/2021 11:16 PM

Make it work in an actual framework. Re-implement, refactor it to have an API, rather than building an API from scratch.

app.interserval.systems, /api/

ISME → Interverse

Lens view → interprets UUID (object)

organization of organizations, all objects are organizations

Components are made up of components

Organization	UUID
Department	UUID

- ☐ Bring up ISME on development server. Transfer to Laravel. Hands off production elements, they are fine and all operating correctly now as of 3/31/2021 2:06 PM .
- ☐ ISME will become "interverse" once it has been "generalized"

Disk2VHD utility for TREASURE-CHEST
